

## Hat Picker Activity

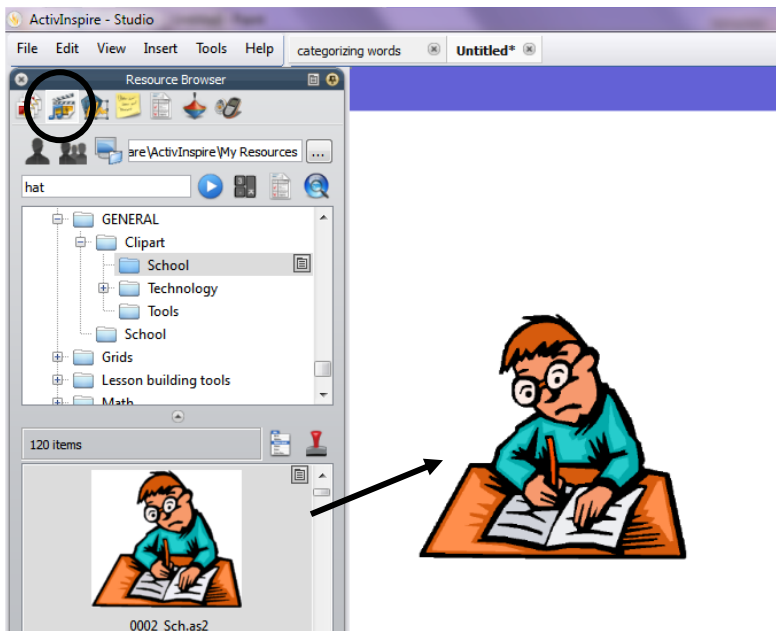

The “Hat Picker” allows the user to pull objects (answers, names) out of another object (hat, book). For example in this Flipchart words associated with stories will be pulled from the student’s book.

**1<sup>st</sup> Step** Type the words that you want to pull from the object.

These words will be in the middle layer because they are typed first.

**2<sup>nd</sup> Step-**

Insert the image that the objects will be pulled out of.

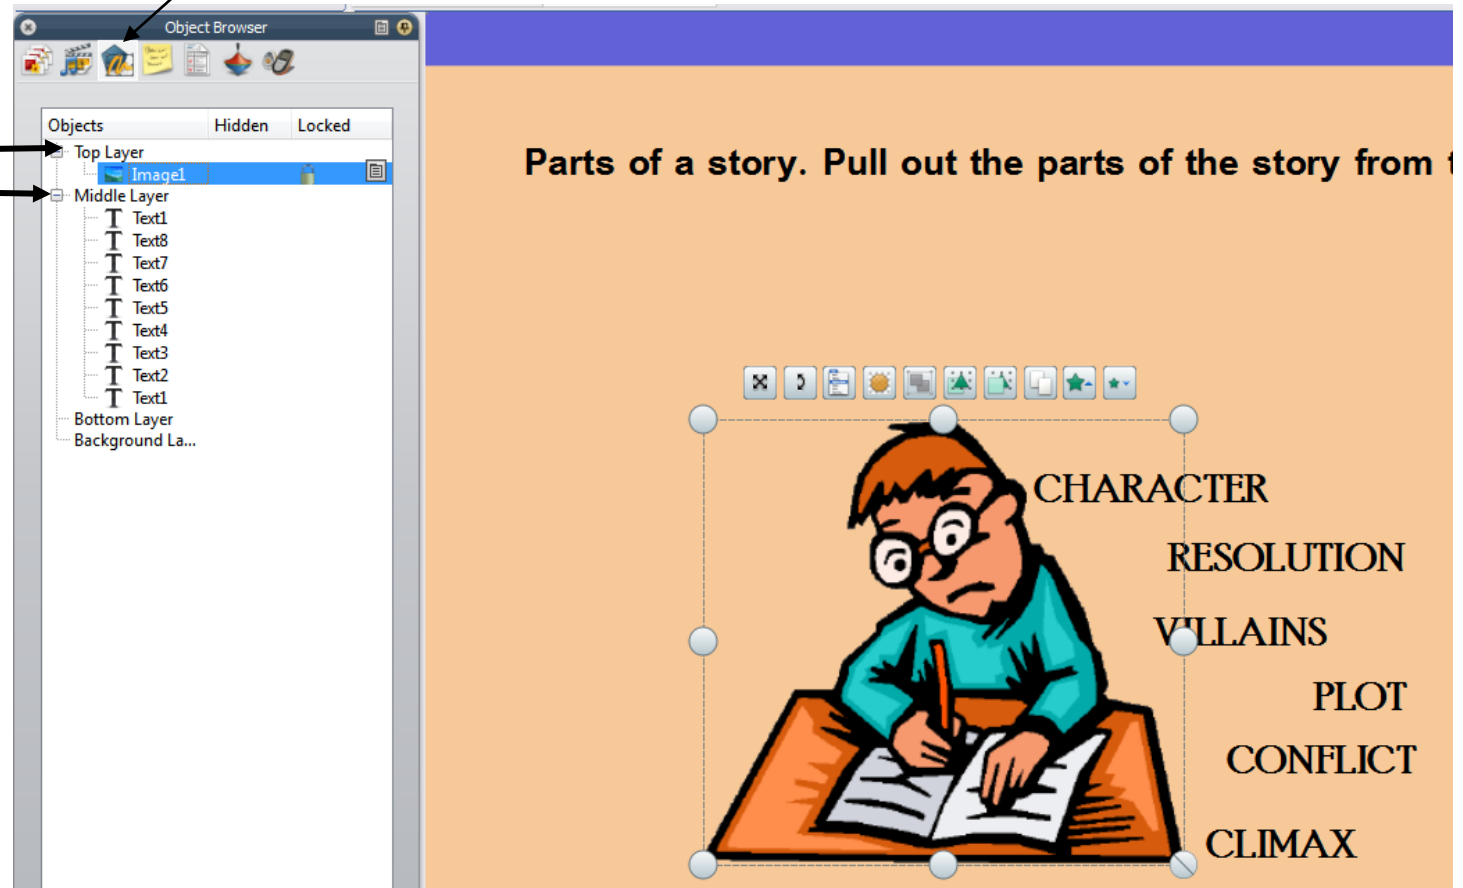

An example could be a hat.

In this case I went to Resource Browser and inserted a picture of a boy.

I did this by dragging the boy from the Resource Browser to the Flipchart page.

This image will be on top layer.

**3<sup>rd</sup> Step**-Go to Object Browser to check to make sure the words are in the middle layer and the image is in the top layer

**4<sup>th</sup> Step** Drag the words to the book. The words will be hidden behind the book. To see the words, simply drag from behind the book to any empty space.
